

I am asking the FCC to reject the NAB's petition 04-160. I listen to XM radio and frequently make use of the traffic and weather service, especially when traveling. It would be difficult to find this information in a timely manner when in another town or state without XM's service. They are the only service I know of that has this information available instantly.

I pay for my XM service and feel that no persons or groups should have the ability to limit what programming is available to me.
